

Enough is Enough

11 Apr 1985

This has gone far enough, if ever there was a battle cry that should be ringing in the ears of the Heber City Council and the Wasatch County Commission, this is the one.

The public deserves better than it is receiving in the wasteful practice of supporting two law enforcement agencies. Has the time not come to combine the Heber City Police and the Wasatch County Sheriff's Department into one efficient law enforcement agency?

The population of Heber City can no longer afford the ego building luxury of having its own arm of the law. The double taxing of the city and county to support two law agencies has gone just about as far as it could go.

We enjoy the security that a city police department provides, but the history of the Heber City Police Department over the last ten years has been plagued with a turnover rate that staggers the imagination.

Why not end this insanity of duplicated services and create one professional, efficient law enforcement agency that has the personnel to do the job. This alone would create a savings to the community and at the same time possibly allow for additional funds to upgrade a single department.

We at the Wave realize this is not the first time that we have tried to motivate the city and county governments to get together on this matter. If history is any example, it will probably not be the last time we editorialize on this topic. But, in light of the events of the last few months within the Heber City Police Force, we can't help but feel there has got to be a better way than what we are saddled with now.

We feel that the City Council and County Commissioners need to get together now, to discuss the concerns of the citizens, and do what is in the the best interest of the communities served. Even if the consolidation was for a short period, it will show whether or not department could function.

We have lost a number of good policemen from the Heber City force in the past ten years. If we don't try the consolidation now, leave the department alone and it will probably go the way of its predecessors and we will once again have the opportunity to start from square one.

Will it never end...

Births

Twitch and Sandra Hardman are proud to announce the birth of their daughter, Jessica Jean. She was born on March 5, 1985 at Wasatch County Hospital. She weighed 8 lbs. 3 oz. and was 21 inches long. To welcome her home, are her two brothers,

Jeremiah and Jedediah.

Her grandparents are Earl and Jean Hardman and Nile and Karma McDonald. Great grandparents Lynn and Dawna McDonald and Mrs. Mable Anderson. Her great, great grandmother is Mrs. Ila Montgomery.

photofun

the lens as the tiler (assuming you do clean one or the other now and then)? Protecting the lens is another argument for permanent filter installation. A lot of wind blown dirt and sand as well as salt water can raise havoc with a lens. How many times do you photograph under these conditions though? Finally, if you're going to drop your camera or knock it around, a good rubber lens hood will give far more protection than a filter.

off. The quality of your pictures will improve.

This is not to say that filters are not beneficial in photography. Nothing could be further from the truth. There are many times when proper usage of a filter will improve your pictures.

Basically there are two reasons to use a filter. One is to obtain a true rendition of the subject. Many times it is important to accurately record a color. The
